

Nurse Practitioner Healthcare Foundation

Join the Influenza Diabetes Community to Protect Patients With Diabetes: A Call to Action!

Did you know that patients with chronic conditions, such as those with diabetes, are especially vulnerable because of higher risk of complications? And, this is true regardless of how well their diabetes is managed?

Join the **Influenza Diabetes Community** in recommending and getting your patients vaccinated each year. Getting vaccinated is the best defense against influenza.

As part of this Community, you have free access to important education. Please go to https://idc.mytonomy.com/users/sign_in to learn more about influenza, flu vaccine, and how to talk with your patients about getting vaccinated.

As healthcare professionals, we have a responsibility to our patients, our families, and to ourselves. Please join NPHF in this global effort to prevent disability or death associated with influenza infection.

Getting vaccinated is our best defense!
